 This report is the international preliminary examination report, established by this International Preliminary Examining Authority under Article 35 and transmitted to the applicant according to Article 36. 								
2. This REPORT consists of a total of 4 sheets, including this cover sheet.								
3. This report is also accompanied by ANNEXES, comprising:								
a. (sent to the applicant and to the International Bureau) a total of 2 sheets, as follows:								
sheets of the description, claims and/or drawings which have been amended and are the basis of this report								
and/or sheets containing rectifications authorized by this Authority (see Rule 70.16 and Section 607 of the Administrative Instructions).								
sheets which supersede earlier sheets, but which this Authority considers contain an amendment that goes								
	beyond the disclosure in the international application as filed, as indicated in item 4 of Box No. I and the Supplemental Box.							
		War and the Colorest and the Colorest						
b. (sent to the Internation	• • • • • • • • • • • • • • • • • • • •	ndicate type and number of electronic carrier(s))						
, containing a sequence listing and/or tables related thereto, in computer readable form only, as indicated in the Supplemental Box Relating to Sequence Listing (see Section 802 of the Administrative Instructions).								
This report contains indications in	relating to the following items:							
1	of the report	•						
Box No. II Priorit								
Box No. III Non-e								
Box No. IV Lack of unity of invention								
Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial								
		ons supporting such statement						
Box No. VI Certain documents cited								
Box No. VII Certai	Box No. VII Certain defects in the international application							
Box No. VIII Certain observations on the international application

2. Citations and explanations (Rule 70.7)

This report is based on new claims filed after the Written Opinion.

The claimed invention

The claimed invention relates to the problem concerning preventing that an improper sterile product is connected to medical technical equipment.

The problem is solved by arranging a fixed identification tag on the sterile product. The tag is read by a sensor on the equipment without touching the sterile product and a decision is made whether the sterile product is suitable to use or not.

Prior art

)

In the International Search Report the following documents were cited:

D1: DE19822751

D2: US5591344

D3: WO0174421

D4: WO9305829

D5: US5131823

D6: EP1101506

D7: US5078683

D3 describes an angiographic injector subassembly. In D3 a bar code is placed on a sterile syringe and is read by a reader on the syringe holder. The bar code information is processed and the system is blocked and information is presented to the user if not an appropriate bar code was read. This system prevents the use of incompatible syringes. (See page 14, line 20-28.)

D5 describes a device for joining a connection piece to a peristaltic pump. (See figure 1-3 and abstract.)

INTERNATIONAL PRELIMINAL REPORT ON PATENTABILITY

Supplemental Box

In case the space in any of the preceding boxes is not sufficient. Continuation of: $Box\ V$.

D6 describes a medical gas delivering system. In D6 a sterile filter is attached to the gas delivering equipment. The sterile filter comprises a machine readable identification element, for example a bar code. When the filter is connected to the equipment the bar code is placed in front of reading unit that identifies the filter. Based in this identification an evaluation process starts. An evaluation unit comprises a memory, in which information on filters is stored. If a filter has been used before the memory contains information about this and the system then blocks the gas supply and alerts the user. If the filter has not been used before the system will start delivering gas. (See paragraphs 0008-0009 and 0016.)

Documents D1, D2, D4 and D7 represent the prior art. The claimed invention is not considered to be anticipated by these documents.

Statement of reason

The cited documents represent the general state of the art.

The invention defined in claims 1-7 is not disclosed by any of these documents.

The cited prior art does not give any indication that would lead a person skilled in the art to the claimed identification device. Therefore, the claimed invention is not obvious to a person skilled in the art.

Accordingly, the invention defined in claims 1-7 is novel and is considered to involve an inventive step. The invention is industrially applicable.
